Twin-cam Security Lock (TSL)

Twin-cam Security Lock - TSL

High security locking

Loss of treasured possessions and damage to property are obvious consequences of burglary, but the invasion of your home by a complete stranger can be particularly disturbing for you and your family. Twin-cam Security Locking (TSL) from Roto is a major breakthrough in window locking systems, offering more than double the security of industry standard products and giving you a host of reassuring benefits:-

Strong

Innovative design makes TSL one of the strongest and most reliable locking systems on the market.

Reliable

High quality materials and finishes give TSL exceptional corrosion resistance, whilst tight production control ensures each product will last for years. TSL also carries a 10 year guarantee to give you even more assurance.

Easy to use

Precision engineering gives TSL its smooth, effortless operation. All you need to do is simply turn the handle!

Secure

The TSL's locking points are arranged in pairs. Each pair consists of two high-strength, adjustable cams with 'mushroom' heads for additional security.

When you close the window, you turn the handle down into the locking position. As you do this, TSL's unique gearbox and drive mechanism makes each pair of cams move together, locking into their respective frame keeps with a clamping action. This provides increased resistance to 'jimmying' in both directions.

The TSL has enabled a wide range of PVC, timber and aluminium windows to meet the rigorous demands of standards such as BS 7950 (Specification for enhanced security performance of windows for domestic applications) and achieve accreditation from bodies such as BBA and Secured By Design.

Available

TSL suits all of the industry's popular window systems, so you can be sure that your window supplier will be able to give you exactly what you want.

Insist on TSL!
